TOILET CLEARANCE INSTALLATION

#1 – When the clearance behind a toilet does not allow for the installation of a continuous Radiant Wraps panel, the layout will require two separate sections to be installed. This photo shows an independent panel section coming in from the right side.

#2 – This photo shows the panel coming in from the left side. Please note that this layout incorporates an inside corner and also the water supply line to the toilet. The location of the water supply line must be taken into account when designing this type of layout.

#3 – Once the two panels have been installed, we will request that the customer make a rigid cardboard template to trace out the top rail and face panel openings. Radiant Wraps will use this template to custom-make the pieces for the top rail and the face panel.

#4 – This picture shows the finished toilet area retrofit. Remember that the custom-made sections behind the toilet will not be highly visible.
